AI & Copyright

The Challenges Ahead For Startups

Eager to understand the link between AI and copyright? Here are some **key things** to keep in mind for startups diving into this intricate landscape.

1

Get materials legally

Make sure you're getting your hands on copyrighted materials the right way. Whether you're buying them, getting a licence, or using publicly available stuff, **make sure it's all legal and above board.**

2

Watch out for opt-outs

Some folks who own the rights to stuff can say "no" to letting you use it for Text and Data Mining (TDM). So, **check if they've put a stop to TDM, and plan accordingly.**

3

Follow the rules of your licence

If you're using copyrighted materials through a subscription or licence, **pay close attention to what the rules say about TDM.** Stick to these rules carefully to avoid any legal hiccups.

4

Keep things secure

Any copies of works you make for TDM need to be kept safe and sound. Don't share them illegally. Make sure your data security measures are up to snuff.
